Sprint 2 Report: Social Analytics
Final Revision 07/17/2018
Sprint time: 07/11/2018 - 07/17/2018

Things to stop doing:
Changing implementation strategies. We will decide the full and exact breadth and depth of a task before beginning it.

Actions to start doing:
Meeting more. We will plan more Scrum and otherwise meetings together in person to work and discuss.
Integrate into the master branch more often

Actions to keep doing:
Meeting together to integrate completed tasks and components. We have had many meetings to code together and help each other piece together different modules of the app.

Work completed:
User stories 1 and 2 were completed with some tasks differed and user story 3 was completed as planned. Story 1: login and signup UI was completed but functionality, I.E. interacting with the database, has been moved to sprint 3. However, the database is up and running. Story 2: we have decided not to store tweets in the database and call the Twitter API each time a request for analysis is made.

Work Completion Rate:
3 user stories were completed over the course of a combined 47 ideal work hours. We average .43 user stories per 6.71 average ideal hours per day.
